 Tel No: _____

Engineer's comments:

Kamco power flushing completion certificates enable heating engineers to leave customers with a professional looking certificate of completion after the job has been finished.

They give reassurance to the householder that the work has been carried out thoroughly and leave them with information they need on what chemicals have been used, and which corrosion inhibitor was left in the system.

Building regulations, and boiler manufacturers now insist on the use of a Buildcert approved inhibitor. The certificate confirms that the heating engineer has complied with these requirements.

As boiler manufacturers extend the length of boiler warranties, it is probable that the extended boiler warranty will be conditional on system treatment, and an annual check that the heating system has

sufficient inhibitor present.

Each certificate has an NCR paper copy left in the bound pad, so that engineers have an easy to retain record of the heating system details and when the work was carried out.

A comments section has room for engineers to detail further work recommendations if design problems have led to the need for a power flush.

Power flushing promotional leaflets

Kamco promotional leaflets are dual purpose and intended for use by heating engineers to promote their power flushing expertise to customers, and to briefly explain to customers the benefits to them of power flushing, the type of problems that can be cured, and the actual procedure.

If the decision maker is not at home when you advise that a power flush is needed, then one of these leaflets left for that person to read later should prove very effective.

The leaflets are a handy 1/3rd A4 size so that they fit in a standard mail envelope for an economical mail shot for engineers to generate future business.

There are no Kamco contact details, so that the recipients have to contact heating engineers directly. To make this happen, the fourth side has a boxed area for heating engineers to apply their own stamp or label.

The four colour promotional leaflets are available in packs of 200.

Every Kamco power flushing pump comes with a sample pack of 50 of these leaflets.

Price: £16.00 + VAT per pack of 200 leaflets.

Weight based carriage / postage charges apply to order values under £300.00 net.
